Salon Wax *Sensitive*

Waxaway Salon Wax *Sensitive* is formulated based on Australia's most popular salon professional hard wax as used by beauty therapists worldwide. It is perfect for super sensitive skin as its unique microwaveable, hypoallergenic formula contains properties to effectively reduce skin redness and irritation.

Waxaway Salon Wax *Sensitive* eliminates unwanted hair by the roots. With regular use, hair growth becomes progressively reduced allowing for beautiful, smooth skin, free from razor rash, nicks and cuts.

To achieve professional results at home, carefully follow these simple instructions:

Preparation

1. After shaving or using depilatory creams you will need to allow the hair to grow for 14 days or to the length of approx 5mm – 1cm so that the wax can grip onto the hairs.
2. Longer hair such as the bikini line and underarm should be trimmed to approx 5mm – 1cm before waxing.
3. ***Always test a small part of the area to be waxed 24 hours before use to ensure no skin irritation occurs. As skin conditions can change this should be done before every waxing treatment.***
4. Avoid waxing immediately after a hot bath or shower.
5. Area to be treated must be dry, clean and free from oils and creams. In extremely hot and humid conditions lightly dust the skin with talcum powder before use.

Heating Instructions

Remember, wax should resemble honey and not be uncomfortably hot. Ideal working temperature is 45° – 50°C.
REMOVE LID AND SEAL PRIOR TO PLACING IN THE MICROWAVE.
NEVER ALLOW TO BOIL.
OVERHEATED WAX CAN CAUSE SERIOUS BURNS.
CAUTION: Ensure Radio Frequency I.D Tag has been removed from jar prior to heating.

Heating time should be adjusted according to the amount of wax in the tub and the power of your microwave. The recommended heating times in the table above are supplied as a guide only for microwaves with a power of 900 watts (please refer to your microwave manufacturer's instructions).

1. Place the wax tub in the microwave, off centre. Never place in the centre of the microwave.
2. Always use your microwave on the HIGH setting (never defrost or cook).
3. Check the table following for the appropriate heating time and start your microwave.

AMOUNT OF WAX IN TUB	900 WATT MICROWAVE OVEN
FULL TUB	2 MINUTES
HALF TUB	1 MINUTE 30 SECONDS

4. Leave the wax to stand for 3 minutes in the microwave (switched off) immediately after heating to allow for a better diffusion of heat through the wax.
5. After letting the wax stand for 3 minutes take the tub out of the microwave taking care to keep it level. It is recommended to use a towel to avoid burning hands.
6. Dip the spatula gently into the tub and gently scoop the wax from the bottom to the top as well as the edges until all the wax in the tub reaches a uniform consistency and temperature.

Note: After heating the wax there will be two different parts. A liquid part and a solid mass. Mixing these two parts will create the ideal consistency of creamy honey.
If the wax is not sufficiently softened i.e. it is difficult to stir or spread in thin layers, place back in the microwave to heat for a further 10 seconds at a time (no more) until the ideal consistency is achieved.

Caution: If the wax becomes liquid or bubbly it has been overheated so leave to cool for at least 5 minutes before handling. Check again for correct consistency and leave for additional time if required.

Directions for Use

Please read warning section before use.

Always test wax on wrist first. Wax should not be uncomfortably hot. Its ideal consistency resembles honey.

1. Determine the direction of hair growth.
2. When using disposable wooden spatula (for large areas) or cotton bud (for smaller areas) ensure you coat a generous amount of wax on the applicator taking the wax from the core section of the tub whilst twirling at a steady slow clockwise pace. **a)** Wax dripping off applicator – wax is too hot. **b)** No movement – wax is too cold. **c)** If movement resembles honey you have the perfect temperature.
3. Spread a thick oval shape layer of Waxaway Salon Wax *Sensitive* in the direction of hair growth. Refer to diagrams for graphic and specific instructions.
4. Wait 15-20 seconds. The wax is ready to be removed when it no longer sticks to the fingertips. To speed up this process and if hands are sticky sprinkle talc on wax and hands.
5. Do not allow Waxaway Salon Wax *Sensitive* to set hard, it must be flexible like plasticene.
6. Ensure the skin is taut either by tightening your muscles or by holding the skin firmly with one hand. Hold onto the edge of the wax and quickly pull in the opposite direction of hair growth as close to the skin as possible.
7. If hairs are not removed the first time repeat procedure again.
8. Any wax left on the skin may be removed by applying Waxaway After Waxing Oil.
9. The area waxed may appear slightly pink after waxing and a tingling sensation may be felt. This is normal and will subside within 24 hours. It is usual for follicles in waxed areas to bleed a little. Apply a cold compress to reduce any inflammation that may occur.
10. Do not re-wax area if skin is red or irritated.
11. Do not wash off with water.
12. Do not reuse wax.
13. Do not leave spatula in the tub.
14. If wax comes into contact with bench tops, floors and carpets let dry completely so it is a solid mass and then peel off.
15. Store with lid on tightly in a cool place.

Helpful Advice for Better Waxing

1. The thicker you apply the wax the better the results.
2. For a more comfortable and effective treatment pull the wax back quickly and as close to the skin as possible.
3. If hairs are not removed the first time this may be due to dead skin cells. In most cases the second application warms the hair follicles and stubborn hairs are removed with ease.
4. It is advisable to practice waxing on the legs first so that you perfect your technique.
5. ***Extreme care must be taken to keep skin taut when waxing the face, bikini line, underarm, thighs and stomach as these areas have a tendency to be soft due to the lack of muscle support and hair is usually thick and coarse. Failure to do so could result in bruising of skin and ineffective results. You may require the assistance of a friend.***
6. Knees and elbows must be kept bent due to ridges and dry skin. These areas may need extra attention.
7. To prevent skin irritation and pimples do not apply moisturisers or expose skin to direct sunlight.
8. If you find Waxaway Salon Wax *Sensitive* unsuitable for your skin type or condition, try

Pre & Post Care

For the perfect salon result use:

Waxaway After Waxing Oil - This high quality antiseptic contains tea tree oil and totally removes sticky wax residue from the skin.
Waxaway After Care Lotion - For the ultimate finish this soothing lotion alleviates bumps and irritation and replenishes the skin with vital nutrients.

Use **Waxaway Waxing Essentials**, the complete set of salon quality disposable waxing items to complement your waxing treatment.

The **Bump eRaiser Ingrown Hair Treatment** range is the perfect companion to Waxaway.

- Medi Paste - Fast acting spot treatment eliminate ingrowns after hair removal.
- Concentrated Serum - natural fruit acids prevent and treat ingrown hairs.
- Triple Action Lotion - works on 3 levels for longer lasting hair removal.

WARNING: Please read this information carefully

- Always test a small part of the area to be waxed 24 hours before use to ensure no skin irritation occurs. As skin conditions can change this should be done before every waxing treatment.
- Practice the use of the product on less sensitive areas such as the arms and legs before using on face and other sensitive areas.
- Not suitable for diabetics or persons with circulatory problems or people taking oral retinoids.
- Not suitable for the elderly or persons with loose skin.
- Keep out of reach of children.
- Do not swallow.
- Skin may be sensitive after waxing.
- Do not expose the newly treated skin (area where hair has been removed) to direct sunlight for at least 24 hours after treatment. Protect your skin with a sunscreen.
- After waxing we recommend waiting for 24 hours before using antiperspirant, a perfumed product or sunbathing.
- We recommend avoiding activities that may irritate the skin for 2 hours after use of the product.
- If irritation occurs or persists consult a doctor.
- If you get overheated wax on your skin, rinse under cold running water for 10 minutes.
- Store below 30 degrees Celsius.

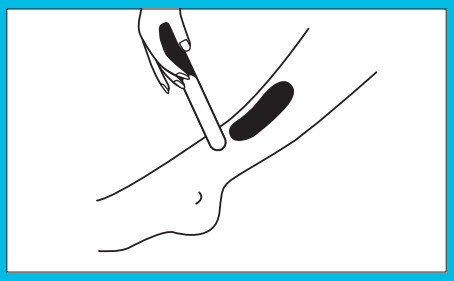
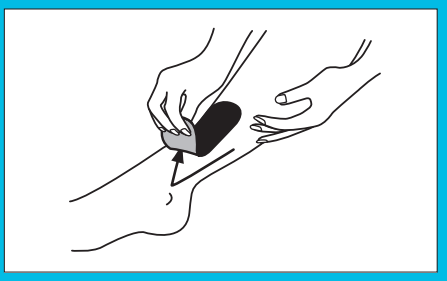
General Waxing Guide - Waxaway Salon Wax *Sensitive*

These basic rules apply to waxing the body and the face.



Step 1 Determine the direction of hair growth. Dip spatula 5cm into wax for large areas. For facial areas, use the tip of a cotton bud. Spread a thick oval shape layer of Salon Wax approximately 5cm wide by 12cm long in the direction of hair growth. Hair should not be visible under wax.

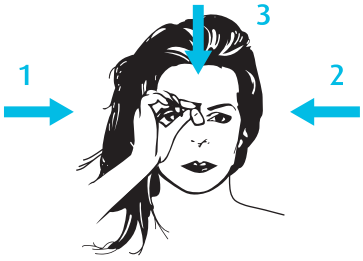
Step 2 Wait until wax no longer sticks to fingertips. Do not allow it to set hard. It must be flexible like plasticine.



Step 3 Hold skin taught with one hand and gripping on to the edge of the wax, quickly pull back in the opposite direction of hair growth as close to the skin as possible.

CAUTION: Please read Directions for Use. If hairs are not completely removed, repeat procedure. To relieve discomfort, apply a cold compress. Do not wash off in water. Remove wax residue with Waxaway After Waxing Oil or Waxaway After Care Lotion which reduces redness.

Eyebrows



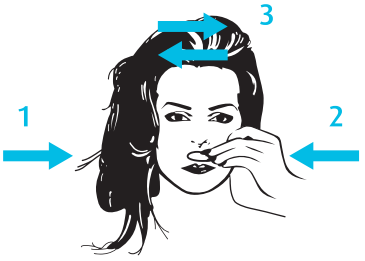
Tie hair back off the face prior to waxing eyebrows. Raising eyebrows support brow bone. Between eyebrow stretch forehead.

SECTION 1 (right eye) Pull wax to the left.

SECTION 2 (left eye) Pull wax to the right.

SECTION 3 (between eyebrows) Pull wax down toward the nose.

Upper Lip



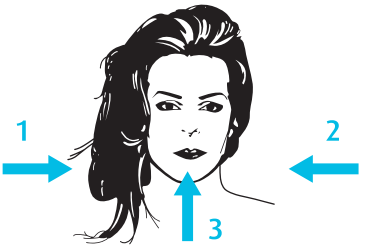
Use a cotton bud as an applicator. Keeping mouth closed push tongue into the corner of your upper lip so lip is stretched. Stretch upper lip to remove hair under nose.

SECTION 1 (right side) Pull wax to the left.

SECTION 2 (left side) Pull wax to the right.

SECTION 3 (under nose) Pull wax across from the left to the right and then from the right to the left.

Face, Neck & Chin



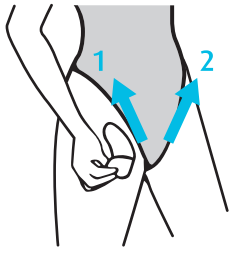
Tilt head back and stretch neck, proceed to wax from side to side. Only wax facial hair that is visible.

SECTION 1 (right side) Pull wax to the left.

SECTION 2 (left side) Pull wax to the right.

SECTION 3 (chin & neck) Pull wax up. Remember it is important to pull wax off in the opposite direction of hair growth.

Bikini Line

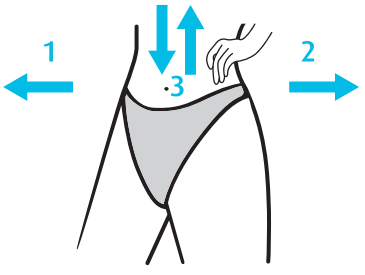


If necessary cut long and curly hair to approximately 5mm–1cm. Spread a thick oval shaped layer of wax 3cm wide x 8cm long in the direction of hair growth. Support slackened thigh muscle by gripping the back of the thigh.

SECTION 1 (right side) Pull wax up.

SECTION 2 (left side) Pull wax up. Remember it is important to support your skin when waxing this delicate area.

Stomach



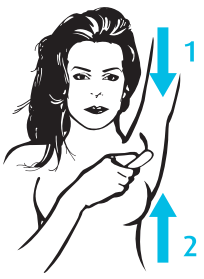
Hold stomach muscle in tightly.

SECTION 1 (right to centre) Pull wax to the left.

SECTION 2 (left to centre) Pull wax to the right.

SECTION 3 (from top of the bikini line to the navel) Pull wax toward bikini line and follow in opposite direction.

Underarms



Make sure armpit is dry and if necessary cut long hair to approximately 5mm – 1cm. To ensure armpit is completely dry, dust talcum powder on it first. Underarm hair usually grows in 2 directions. Work upper armpit and lower armpit separately. Place one hand behind your head and proceed to wax in sections shown.

SECTION 1 (upper armpit) Pull wax down.

SECTION 2 (lower armpit) Pull wax up.
